

These are the solution to coupler confusion and are designed for those who have a variety of interchange present in their operations or for those who are unsure which series they have. They will mate with all three of the most popular styles (Industrial, Automotive, and ARO Series) as well as high flow CEJN 320/410 and Rectus couplings. They are suitable up to 250 psi air and flow rates on the 1/4" body are 37 CFM @ 100psi, and 70 CFM @ 100psi on the 3/8" body.

HIGH-FLOW INTERCHANGE (EUROPEAN HIGH FLOW)

These were designed to provide users with more flow in a compact 1/4" body quick connect without having to jump up to a 3/8" body. They provide up to 50% more air flow than conventional 1/4" couplers and with minimal pressure drop (less than 2 psi). They are ideal for air powered paint spray equipment, sanders, grinders, and other high air volume tools up to 300psi (maximum air flow is 37 SCFM @ 100psi). They will interchange with CEJN 320/410/420, Rectus 25KA/26KA/27KA, Megaflow, and other European high-flow couplings. They are not for use in air breathing applications. Couplers have a solid brass body and a hardened steel sleeve.
