Dexterity®

Winter-Lined Nylon Gloves with PVC Palm

#SNTAPVC

Warm, dry and flexible: these are the top characteristics built into our Dexterity® PVC-coated winter gloves.

The warmth of this glove comes from two layers of fabric: nylon on the outside and soft fleece on the inside, creating a glove that's both light and warm. Additionally, this construction provides enhanced protection against abrasion and impact.

The crinkle-grip PVC palm coating assures that hands stay dry and warm, while improving grip in working conditions.

The special formulation of the PVC palm coating is what allows this glove to maintain a good level of flexibility. The PVC is filled with tiny air bubbles (micropores) to stay flexible, even in colder temperatures, meaning you don't have to give up flexibility and comfort, and you get a grip that's outstanding, wet or dry.

An ideal glove for workers in commercial fishing, agriculture, construction, utilities, cold storage and any other occupation where winter conditions are a factor.

"Our employees prefer them over any others that we have tried. They keep their hands dry and still have good grip when wet and are very durable. Let's just say that I have tried other similar gloves but our employees keep requesting these specific gloves."

Debra, Safety Coordinator, CanWest Concrete Cutting & Coring Inc.
