# Series CA6 Motor Protection Contactors

CA6-860-El contactor

Sprecher + Schuh's CA6 contactor line combines the simple function of our popular CA7 series with the rugged performance demanded in this middle horsepower range. On average these contactors are 50% smaller than traditional contactors in this size class. The entire CA6 line is modularly designed for easy inspection, coil change and contact replacement. Maintenance can be performed from the front so that mounting requires no additional space. Even with the installation of mechanical interlocks and auxiliary contact blocks, the units can be flush mounted side by side, saving panel space.

## Safety first

CA6 arc chambers are completely enclosed (without arc exhaust vents), offering the best protection against hot arcing gases. A large safety distance in front of the contactor is unnecessary. CA6 contactors are also designed so that operation is impossible if the arc chambers are removed. Conversely, once the contactor is energized, the arc chambers cannot be removed. When used with terminal covers or HB Touch-Safe Lugs, CA6 contactors meet international standards for touch-safe design.

## A broad selection for middle horsepower applications

The CA6 range consists of nine contactors in three frame sizes covering motors from 75 to 600HP at 460V and from 100 to 700HP at 575V. This line is ideally suited for demanding applications such as steel mills, rock quarries, mines or for any middle horsepower application where a sturdy, durable contactor is needed.

## Rugged and reliable

CA6 contactors conform to UL508, IEC 60947 and can be operated at rated voltages up to 600V (UL) and 1000V (IEC). High thermal and switching capacities guarantee reliable operation and long life. CA6 contactors are listed in CSA Certified Elevator Equipment for heavy duty use in elevators, refrigerators and heating installations in Canada.

## Arc quenching extends contact life

All CA6 contactors are designed with sophisticated arc quenching techniques that extinguish damaging breaking arcs quickly. This is accomplished by guiding the arc away from the contacts and into "arc chambers" which are built-in to every CA6 cover.

## Electronic coils offer many advantages

Behind the attractive outward appearance of the CA6 contactor are advanced engineering solutions that offer convenience and savings. The entire line can be equipped with an electronically controlled coil that reduces pick-up currents by 60% on average. Holding current is also reduced.

Other advantages of the CA6 electronic coil include:

- Direct connection to a PLC
- Overvoltage protection and suppression circuits (eliminating interference from the coil) are standard
- Smooth, even operation over the entire voltage range minimizes the possibility of contact bounce
- No safeguards are necessary to bridge brief supply interruptions
- Precisely defined pick-up and drop-out voltages, eliminate the possibility of chattering
- Electronic coils operate over a much broader voltage range, providing flexibility in applications and lower costs due to reduced inventory

## AC Coll CA6 Contactor

## Conventional Coil or Electronic Coil Models

Conventional Coil models are available up to 150HP @ 460V. Electronic Coil models are optional up to CA6-180-EI and standard for CA6-210-EI...860-EI models.

CA6 contactors with AC and DC electronic coils operate in two user-selectable modes – the "E" mode for normal operation or the "EI" mode for interfacing directly with a Programmable Logic Controller (PLC) or other low level signal source (13...30.2 VDC). The coil is set in the "E" mode from the factory, offering all of the functions and advantages of an electronic coil with the exception of electronic interface. An orange "jumper" located on the bottom of the contactor can be quickly changed to "EI" mode if interface from a PLC is desired.

240W	230-250V <b>4</b>					
277	277V					
480	440-480V					

\*Replace "\* " with Coil Code above.

- "-EI" designates contactor with Electronic Interface coil.
- Ratings are higher for contactors with electronic coil:

CA6-140-EI-11-★
500V = 98 kW
690V = 135 kW
690V = 176 kW

- **3** 24V Coil is not available for CA6-420-EI.
- Coil is rated AC/DC.

## **Features & Accessories**

CA6 contactors utilize the latest modular design techniques that speed installation, reduce panel space and facilitate maintenance

#### Main Terminal Set

- · Accommodation for single or dual connections to each pole
- · Accepts flat or round conductors
- Touch safe to IP20 according to IEC 60529
- · Eliminates need for Terminal Shields

### Aux. Contact Blocks

• Up to four auxiliary contact blocks (8 poles) may be mounted on the side of the CA6 contactor.

optional with 2-N.C.

## Mechanical Interlock auxiliary contacts

## Screw type lug set

- · Accommodation for single or dual connections to each pole
- · Accepts round conductors
- Copper construction

### Surge Suppressor

- · Limits voltage spikes when switching off coil.
- · Attaches to all CA6 contactors.

### CA6-115-El 3-pole Non-Reversing Contactor

- Connects directly to a low level signal source
- · Very low pull-in and holding current
- Threshold voltages for pull-in and drop-out are very precisely defined, eliminating "chattering"
- · Supply voltage dips are bridged without extra equipment
- "-EI" designates contactor with Electronic Interface coil. "EI" coils cover a much wider voltage range with only one coil
- · Other voltages available

### CA6-140-El 3-pole Non-Reversing Contactor

690V = 135 kW

· Ratings for Switching AC Motors (AC2 / AC3) are higher for contactors with electronic coil:

CA6-140-EI-11-\* CA6-180-EI-11-\* 500V = 98 kW

500V = 126 kW690V = 176 kW

AC or DC coils

Non-reversing NEMA size available (CAN6)
