

Smooth, polished look fits any decor and matches TradeMaster wiring device wall plates. Ideal for any commercial installation where appearance is especially important. And a perfect match for P&S Innovate™ jacks.

Better coverage, with an extra 3/16" more width and height than standard plates to reduce time-consuming drywall rework.

Flexible modular design accepts any combination of P&S Innovate jack modules for fast, easy configuration.

Virtually unbreakable construction features patent-pending reinforcing ribs for enhanced rigidity.

APPLICATION TIP

The perfect match for TradeMaster wiring device wall plates.

Looking to specify network wiring devices that are 100 percent aesthetically compatible with your other wiring devices? Now you can, with the TradeMaster line. The same colors. The same finishes. The same sophisticated contours. The same dimensions. And because TradeMaster power wiring wall plates are available in a full range of colors and types, you don't have to compromise *anywhere* appearance is important. For complete information on the TradeMaster wall plate family, see Pass & Seymour/Legrand Catalog 200.

- Features**
- Recessed labeling provides easy identification. Helps meet TIA/EIA-606 labeling standard. Labels and protective clear covers (both included) hide mounting screw heads.
 - Jack modules snap in from the front to make installation fast and simple. Remove jacks from the front without removing the plate for easy reconfiguration.
 - Rugged ABS construction for durability. Rated UL94 V0.

CABLING TIP

How to get proper cable bend-radius space with single gang wall plates.

For optimum network performance, it's essential to avoid sharp bends in network cabling (see page 54 for additional details). That's difficult within the width of a single gang box — so the TIA/EIA-569 standard recommends a 4" x 4" box. Use a mud ring to adapt a single gang wall plate to a 4" x 4" box, and you'll have plenty of space for proper cable bend radii.
