Encapsulated Core & Coil

Where quiet performance is required, the standard open core & coil ballasts are encapsulated (potted) in a cube-shaped steel can utilizing Class H (180°C) polyester compound. These ballasts carry a Class A noise rating up through 175 watts and Class B for 250 and 400 watts. As with the open core & coil, the capacitor (and ignitor where included) are mounted separately within the fixture.

Fluorescent Can (F-Can)

For indoor commercial applications of HID lighting such as offices, schools and retail stores, ballast noise must be minimized. Ballasts for these fixtures are most often encased and potted in fluorescent ballast type cans and utilize Class A (90°C) asphalt insulating materials (the same as used in fluorescent lamp ballasts).

The Advance line of F-can balasts comes in two dual-voltage configurations: 120/277 volt for the US market, and 120/347 volt for the Canadian market. Each unit has built-in, automatically resetting, thermal protectors which disconnect the ballast from the power line in the event of overheating. All units are high power factor and include the capacitor within the can. All models for high pressure sodium, lowwattage metal halide, and pulse-start metal halide lamps also include the ignitor in the can.

Indoor Enclosed

These units are designed for use indoors where the ballast must be mounted remotely from the luminaire. They are most typically used in factories where the luminaire may be mounted in a high-bay where very high ambient temperatures may be experienced. In these instances, the remotely-mounted ballast operates cooler, subsequently providing longer life because it is away from both the heat of the ceiling ambient and lamp heat within the fixture.

The case contains the core & coil potted in a Class H (180°C) heatdissipating resin. The capacitor(s) and ignitor are contained within a separate compartment. Knockouts in both ends of the case facilitate hook-up in the most convenient manner. Wall mounting is accomplished through flanges on the top and bottom of the case. The ballast is a UL Listed product.

Outdoor Weatherproof

Weatherproof ballasts are designed for remote, pole-mounting outdoor applications under all weather conditions. They may also be placed inside of a transformer pole base, but care must be taken to avoid areas prone to flooding because weatherproof ballasts are not water-submersible.

The core & coil with its capacitor and ignitor (where required) are firmly mounted to the heat-sink base. An aluminum cover is placed over the core-&-coil assembly and is bolted with a weather-tight gasket to the base. An integral 1" threaded nipple with locknut facilities hook-up to electrical conduit or to the mounting bracket when used on a pole. The weatherproof ballast may also be placed nipple-up, with a drip loop in the leads, inside a pole base.

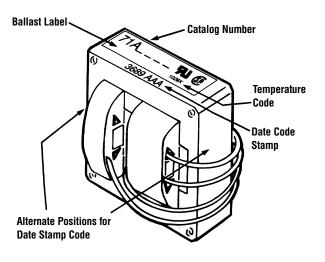

Postline

Lantern-type fixtures mounted on slender poles often require ballasts which will fit into these poles. Special, elongated core & coil ballasts are potted in resin in cylindrical cans having a 2.55" outside diameter. All include leads necessary for direct connection to a photocell.

The capacitor and ignitor (where required) are included within this can. A $\frac{1}{2}$ " threaded nipple is used for vertical mounting, and leads extend from both ends of the can for ease of installation. The input leads to the ballast also provide for proper connection to the photocell if such is included within the fixture.

To help prevent overheating, one to three feet of air space should be allowed in the pole above the ballast, and the ballast should be positioned against the post interior wall to provide a heat-sink. All units rated 100W and above now include a mounting kit consisting of an 18" chain to hang the ballast within the pole and a spring clip to force the ballast's cylindrical can to make line contact with the pole's interior surface to maximize heat transfer, thus prolonging the ballast life.

BALLAST DATE AND TEMPERATURE CODES

ADVANCE [®] HID Core & Coil ballasts are date stamped on either the top surface or the side surface of the ballast core. The four-digit number represents the *week* and *year* of manufacture. The first two numbers indicate the week and the last two indicate the year the ballast was manufactured. The example shows a ballast manufactured during the 36th week of 1989. The three letters are an Advance factory code.

The ballast's UL Bench Top Rise Temperature Code is shown on the label (see below).

UL BENCH TOP RISE TEMPERATURE CODE

To facilitate UL inspection, each ballast's UL Bench Top Rise Temperature Code is shown on the Advance Core & Coil ballast label as 1029<u>X</u>, where 1029 is the UL Standard for HID Ballasts, and the X is the temperature code: **A**, **B**, **C**, etc. If a fixture is UL listed for 1029**C**, then automatically, all ballasts with an **A**, **B**, or **C** temperature classification are acceptable for use within that same fixture.

| UL Bench Top Rise Letter Code | Temperature Range for Class H (180°C) Ballasts | Temperature Range for Class N (200°C) Ballasts |
|----------------------------------|---|---|
| А | less than 75°C | less than 95°C |
| В | 75°C < 80°C | 95°C < 100°C |
| C | 80°C < 85°C | 100°C < 105°C |
| D | 85°C < 90°C | 105°C < 110°C |
| E | 90°C < 95°C | 110°C < 115°C |
| F | 95°C < 100°C | 115°C < 120°C |
| etc. | etc. | etc. |

+ Ordering information:

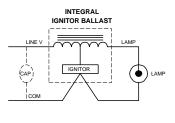

Original equipment ballasts - add proper suffix to catalog number:

-500D includes core & coil with dry-film capacitor

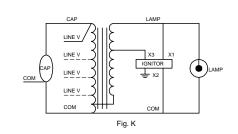

- -510D includes core & coil with welded bracket and dry-film capacitor
- -600 core & coil only (no capacitor)
- -610 core & coil with welded bracket (no capacitor)
- For AR, R and Hybrid circuits, figure is highest of starting, operating or open circuit currents.
- ++ Each ballast requiring an ignitor is furnished standard with the Short Range ignitor model shown for use within fixtures. If a Long Range ignitor is required for remote mounting, specify on order. See pages 5-50 to 5-53 for additional information.
- 277V operation requires the 120V reactor ballast and controller plus the 120/277V auto-transformer listed. Ballast dimensions shown in table are for the reactor ballast component only. See page 5-54 for auto-transformer specifications and dimensions.

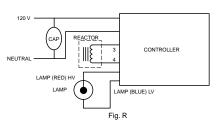

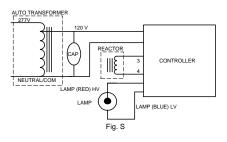

Replacement/retrofit ballast kits indicated by bold type with suffix -001D(B). Refer to pages 5-5 to 5-9.
