

PowPak® 20 A Receptacle Control Relay Module

The PowPak® 20 A Relay Receptacle Control Module is a radio-frequency (RF), receptacle switching solution that is capable of controlling 20 A receptacles based on input from Pico® remote controls and Radio Powr Savr™ occupancy sensors.

Communication with RF input devices, such as Pico® remote controls and/or Radio Powr Savr™ occupancy/vacancy sensors, is accomplished using Lutron® Clear Connect® RF Technology.

These products are also compatible with the Vive™ hub which enables a simple setup process using a standard web browser on any Wi-Fi enabled phone, tablet or computer. The hub also enables control and monitoring of all Vive™ devices. The Vive™ hub can be added at any time and preserves existing system setup by extracting local programming from each device. For a complete list of features supported with the Vive™ hub, see specification submittal 369902.

Note for Replacement: RMJS-20R-DV-B or RMJS-20RCCO1DV-B can replace RMJ-H20R-DV-B.

NOTE: Not intended for control of permanently installed lighting fixtures.

Features

- Softswitch®: Lutron® patented technology prevents arcing of relay contacts, extending product lifetime
- Optional low-voltage dry contact closure output provides integration to HVAC, VAV, etc.
- Receives wireless inputs from up to 10 Pico® remote controls, and 10 Radio Powr Savr™ occupancy/vacancy sensors
- RoHS Compliant
- Able to control 20 A receptacles
- Capable of switching general-purpose loads
- Utilizes Lutron® Clear Connect® RF Technology
- Mounts to a U.S. style junction box through a standard 1/2 in (12.7 mm) size knockout
- Complies with requirements for use in a compartment handling environmental air (plenum) per NEC® 2014 300.22(C)(3)
- Includes required controlled outlet labels for code compliance
- Provides a fail safe mechanism to turn on the output in the event of a missing sensor

Job Number:	

Specifications

Regulatory Approvals

- UL 508 Listed (USA)
- UL 2043 Plenum Rated (USA)
- FCC approved. Complies with the limits for a Class B device, pursuant to Part 15 of the FCC rules. (USA)
- IC (Canada)
- CSA compliant (Canada)
- NOM and COFETEL compliant (Mexico)

Power

- Operating voltage:
120/277 V~ 50/60 Hz
- Standby Power Consumption (all models): < 1.25 W

System Communication

- Operates using Clear Connect® RF Technology for reliable wireless communication.
- RF range is 30 ft (9 m)

Environment

- Ambient operating temperature: 32 °F to 131 °F (0 °C to 55 °C)
- 0% to 90% humidity, non-condensing
- For indoor use only

Softswitch®

- Patented Softswitch® circuit eliminates relay arcing at mechanical contacts
- Output is non-latching

Load Type	Relay Ratings
	120–277 V~ single phase only RMJS-20R-DV-B RMJS-20RCCO1DV-B
Tungsten	20 A
AC General Use	20 A
Resistive	20 A
Inductive	20 A
Motor	1.0 HP 120 V~ 2.0 HP 277 V~

Load

- 20 A; No minimum load requirements. Rated to control 20 A receptacles.
- Motor rating:
1.0 HP (120 V~), 2.0 HP (277 V~)
- The 20 A Receptacle Control Relay Module may be used with, but is not limited to, the following:
 - Monitors
 - Fans
 - Humidifiers
 - Printers
- **NOTE:** Refer to the manufacturer's guidelines for acceptable switching methods.
- The 20 A Receptacle Control Relay Module may NOT be suitable for use with devices that require any of the following:
 - Shut-down process before power is interrupted, such as computers.
 - Cool-down process before power is interrupted, such as projectors.
 - Programming, such as clocks or DVRs.
 - Long warm-up cycle.
- **Not for use with loads that present a hazard if automatically energized. For example, heaters.**
- **Any receptacles that are controlled by an automatic control device must be marked with “⏻” located on the controlled receptacle outlet where visible after installation as stated in 2014 NEC® Article 406.3(E).**

NOTE: Labels with this marking “⏻” are included with the product.

Key Design Features

- LED status indicator illuminates when a button is pressed and turns off 2 seconds after the button is released
- Power failure memory: If power is interrupted, connected receptacles will return to the state prior to the power interruption.

Specifications (cont.)

Contact Closure Output (CCO version only)

- Provides occupancy status to 3rd-party equipment such as building management systems, HVAC, and VAV controllers
- Provides both normally open (NO) and normally closed (NC) dry contacts
- Maintained output type
- CCO terminals accept 20 AWG to 16 AWG (0.5 mm² to 1.5 mm²) solid or stranded wire
- Output is latching
- Not for voltages greater than 24 V_{DC}
- The CCO is not rated to control unclamped, inductive loads. Inductive loads include, but are not limited to, relays, solenoids, and motors. To control these types of equipment, a flyback diode must be used (DC voltages only). See diagram below. For more information, please see Application Note #434 (P/N 048434).

Switching Voltage	Resistive Load
0-24 V _{DC}	1.0 A
0-24 V _{AC}	0.5 A

NOTE: Do not tie the CCO to ground.

ATTENTION INSTALLER

Any receptacles that are controlled by an automatic control device must be marked with “⏻” located on the controlled receptacle outlet where visible after installation as stated in 2014 NEC Article 406.3(E).

NOTE: Labels with this marking “⏻” are included with the product.

NOTE: Do not tie the CCO to ground.

NOTE: Some applications (in USA) require the PowPak® 20 A Receptacle Control Relay Module to be installed inside an additional junction box. For information about how to perform this installation, please visit www.lutron.com, Application Note #423 (P/N 048423). Please consult all local and national electric codes for proper installation methods.

* Important Note

WARNING: Entrapment Hazard. To avoid the risk of entrapment, serious injury, or death, these controls must not be used to control equipment which is not visible from every control location or which could create hazardous situations such as entrapment if operated accidentally.

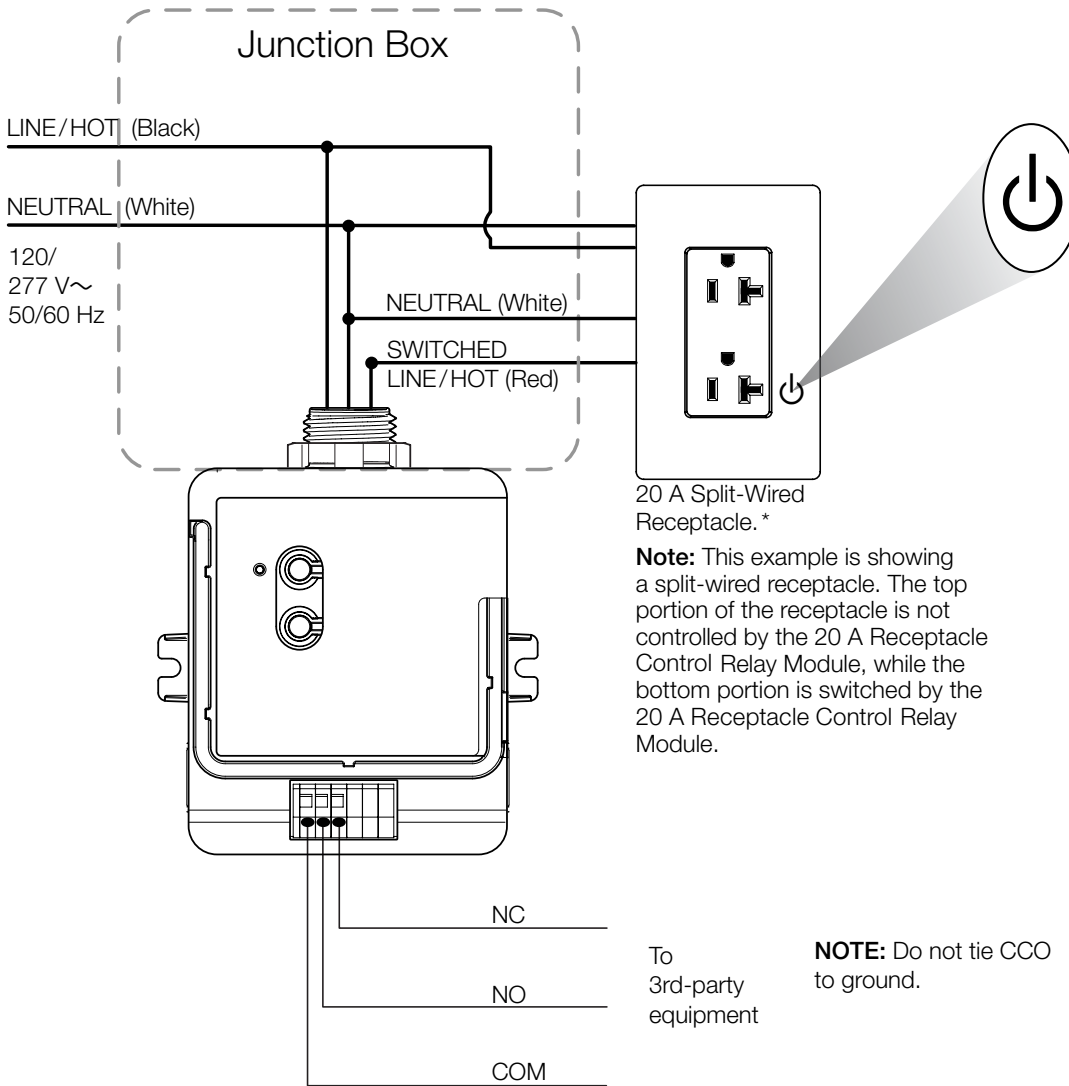

WARNING: Fire Hazard. To avoid the risk of fire, serious injury, or death, these controls must not be used to control equipment which is not visible from every control location or which could create hazardous situations such as fire if operated accidentally.

Examples of such equipment which must not be operated by these controls include (but are not limited to) motorized gates, industrial doors, space heaters, etc. It is the installer’s responsibility to ensure that the equipment being controlled is visible from every control location and that only suitable equipment is connected to these controls. Failure to do so could result in serious injury or death.
