# Harsh environment emergency lighting units steel, thermoplastic or fiberglass cabinets.

The **RGS-DT** Series battery units are specifically designed for use in industrial facilities where equipment is exposed to dust, water, oil or corrosive substances. NEMA-12 classified to protect circuitry from harmful dust or liquid sprays, sealed and gasketed unit cabinets are available in steel, thermoplastic or fiberglass in a variety of sizes.

#### **FEATURES**

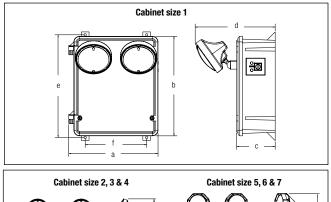

- Solid-state pulse-type charger current-limited, temperature compensated, short-circuit proof and reverse-polarity protected.
- Unit comes standard with electronic lockout and brownout circuits
- Sealed dust-proof transfer relay, test switch and LED indicator lights
- Long-life, maintenance-free sealed lead acid battery
- Standard 120/347VAC input with line cord kit
- NEXUS<sup>®</sup> compatible (for more information on NEXUS<sup>®</sup>, please consult your sales representative)
- Meets or exceeds CSA C22.2 No. 141-15 See warranty details at: www.tnb.ca/en/brands/lumacell

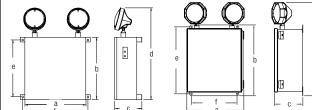

nexus<sup>®</sup> NEMA-12

#### DIMENSIONS

Dimensions are approximate and subject to change.

#### **REPLACEMENT LAMPS**

| MODEL      | LAMP TYPE       | VOLTAGE/WATTAGE |  |
|------------|-----------------|-----------------|--|
| 570.0016-L | Tungsten (LH9W) | 6V-9W           |  |
| 570.0025-L | Tungsten (LH9W) | 12V-9W          |  |
| 570.0045-L | Tungsten (LH9W) | 24V-9W          |  |

### TYPICAL SPECIFICATIONS

Supply and install a complete emergency lighting system as described here in and shown on the drawings.

The Lumacell<sup>®</sup> Smart Diagnostic Micro controller board shall supply the rated load for a minimum of a 1/2 hour to 87.5% of the rated battery voltage. The unit shall be rated 120V or 347V, 60 Hz and be CSA listed. The unit shall have an output of \_\_\_\_\_\_ V.

The charger shall be fully computer tested and its charge voltage factory set to  $\pm$  1% tolerance. Chargers with field-adjusted potentiometers are not acceptable. A pulse-type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide a continuous high charge to recharge the battery, when the battery is at full capacity, the charger will shut-off. Periodically the charger shall provide a pulse of energy to keep the battery topped off. The Pulse charge shall be current limited and precisely regulated by a micro-processing circuit, which samples the battery in relation to its temperature, state or charge and input voltage fluctuations. The charger shall be current limited, temperature compensated, short-circuit proof and reverse polarity protected.

The unit shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency lights when utility power dips below 75% of nominal voltage. A low voltage battery protection circuit shall be provided and will disconnect the battery from the fused output circuit at the end of discharge. The unit shall self-test for 1 minute every 30 days, 10 minutes on the 6th month and 30 minutes every 12 months. The unit shall be capable of full recharge in compliance with CSA specifications. The unit shall be furnished with sealed dust tight relay, a test switch and diagnostic LED indicator lights to continuously monitor the status of the unit: Battery Failure, Battery Disconnected, Charger Failure, Lamp Failure, Service Alarm, AC "ON", Charger High Rate.

The unit shall be CSA 22.2 No.141-15 certified. The unit shall be **Lumacell®** model: \_\_\_\_\_
