

REINVENTING ROUTINE.

Powder-actuated fastening tool DX 2

When Hilti brought powder-actuated technology to the construction industry in the 1950s, professionals couldn't believe their eyes. By 1972, our single load powder-actuated tools were considered the height of performance and innovation. That is until Hilti introduced the DX 350 – the first semi-automatic powder-actuated tool using 10-round magazine cartridge strips.

Today, Hilti remains the industry leader in direct fastening. Based on our years of experience and commitment to innovation, we are proud to bring the industry a premium tool for your daily work – the new powder-actuated fastening tool DX 2. The DX 2 builds on the legacy of our revolutionary direct fastening portfolio and delivers premium performance for a wide range of applications. Whether your daily routine involves installing drywall track or attaching wood to concrete or any number of jobs in between, the DX 2 takes your daily work to a whole other level.

Reinvent your routine with the new DX 2.
