

NEW KWIKON ENT TO AC90 ADAPTER

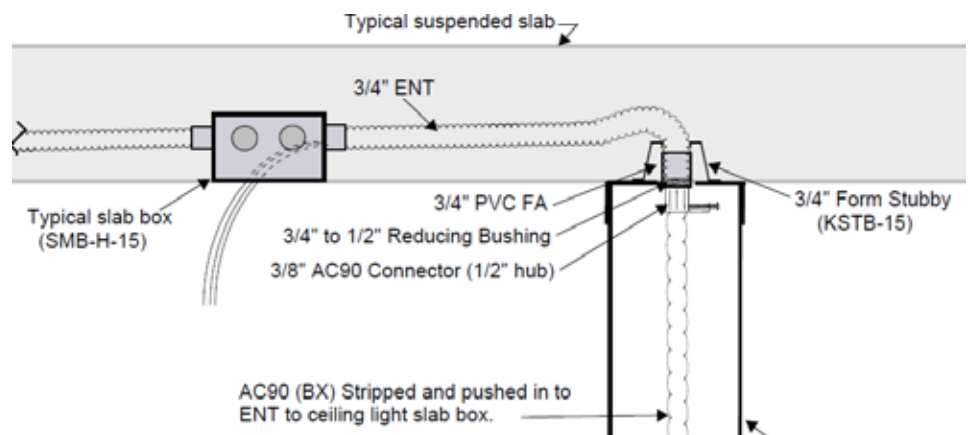

NEW PRODUCT SHOWCASE

IPEX is pleased to introduce the new Kwikon® Adapter for connecting ENT to AC90. The new fitting connects Cor-Line® 3/4" ENT and a 1/2" Female Adapter to make a connection to armoured cable. The addition of this unique product will save contractors time from having to field assemble the combination of fittings or cement the female adapter to an EMT stub.

AC90 (BX) cable is used for open and concealed wiring in dry locations, where the nonmetallic raceways (Cor-Line ENT) are not allowed to be exposed due to flame and smoke requirements of the CEC. AC90 cable is widely used in construction as a cost effective alternative to conduit wiring eliminating the need for conduit, fittings, and the labour associated with pulling in wire, threading, and forming conduit. However, in slab construction, the cable needs to be connected to the Cor-Line ENT and the new KFA 15/10 fitting accommodates this installation requirement.

- Easily connects AC90 wire to Cor-Line ENT for a secure connection
- A non-metallic fitting that provides connection between 3/4" ENT and a 3/8" AC90 Connector (with 1/2" hub)
- Used in high-rise construction saving contractors valuable time and money during installation
- Allows for the transition from EMT or any metal male thread
- Certified to UL 1653 / CSA C22.2 No. 2271

Kwikon Adapter for ENT to AC90

Product Code	Part Number	Carton Qty
089079	KFA 15/10	150
