1. Introduction

The On-Q 6-Bay Mounting Bracket (P/N F9001 as shown below) is designed to mount up to three double bay or 6 single bay GF style modules in virtually any enclosure, including all GF and On-Q styles as well as Leviton and Open House enclosures.

2. Description

The On-Q 6-Bay Mounting Bracket, (see *Figure 1*) is designed to be mounted in the enclosures with multiple push-pins (typically one at each corner). Up to three GF style double bay modules (or up to six single bay modules) can then be mounted in the bracket, using push-pins at the corners of the modules.

3. Installation

The On-Q 6-Bay Mounting Bracket is typically installed during "trim-out" or as an upgrade for an existing installation.

a. Align the holes at the outside of the inner flange of the bracket with those in the enclosure and use push-pins to secure the bracket to the enclosure (see *Figure 1*).

b. To attach double (or single) bay modules, align the push-pins on the module with the holes on the outer flange of the bracket and push in the pins to secure the module to the bracket (see *Figure 1*).

c. Pull lightly on the module to assure it is properly locked in place.
