

Installation Instructions for PSG60E POWER SUPPLY

READ INSTRUCTIONS BEFORE INSTALLING OR OPERATING THIS DEVICE. KEEP FOR FUTURE REFERENCE.

1. Safety instructions

- Switch main power off and wait 5 minutes before making any connection or disconnection on the device. Danger of explosion!
- Dangerous voltage present for at least 5 minutes after disconnecting all sources of power.
- For sufficient convection cooling keep a distance of 50 mm above and below the device as well as a lateral distance of 20 mm to other units.
- The enclosure of the device can become very hot depending on the ambient temperature and load of the power supply. Risk of burns!
- Do not introduce any objects into the unit!

- Device description (Fig. 1)
 (1) Input terminal block connector
 - (2) Output terminal block connector
 - (3) DC voltage adjustment potentiometer
 - DC OK control LED (green)
 - (5) Universal mounting rail system

3. Mounting (Fig. 2)

The power supply unit can be mounted on 35 mm DIN rails in accordance with EN 60715. The device should be installed horizontally with input terminal blocks on the bottom. Each device is delivered ready to install

Snap on the DIN rail as shown in Fig. 2:

- 1. Tilt the unit slightly upwards and put it onto the DIN rail.
- 2. Push downwards until stopped.
- 3. Press against the bottom front side for locking.
- 4. Shake the unit slightly to ensure that it is secured.

4. Removal (Fig. 3)

To uninstall, pull or slide down the latch as shown in Fig. 3. Then, slide the PSU in the opposite direction, release the latch and pull out the PSU from the rail.

5. Connection

The terminal block connectors allow easy and fast wiring. A plastic cover provides the necessary isolation of the electric connection.

Use flexible (stranded wire) or solid cables 0.32-2.1 mm² (AWG 22-14) and torque of 0.78-0.98 Nm (6.94-8.68 lb in). The insulation stripping length should be 7 mm In accordance to EN 60950 / UL 60950, flexible cables require ferrules. Use copper wire that is designed to sustain operating temperature of

75°C or more to fulfill UL requirements. For stranded wires it is recommended to use suitable lug to crimp wires (See Fig. 4).

5.1. Input connection (Fig. 1and Fig. 5)

Refer to Figure 5 for input connections.

The device has an internal fuse. 6 A, 10 A or 16 A power circuit breakers are recommended as backup fuses.

The internal fuse must not be replaced by the user. In case of internal defect, Please call 1-877-ETN - CARE

5.2. Output connection (Fig. 1 (2))

Use the "+" and "-" screw connections to establish the 24 VDC connection. The output provides 24 VDC. The output voltage can be adjusted from 22 to 28 VDC on the potentiometer. The green LED DC OK displays correct function of the output (Fig. 1 (4)). The device has a short circuit and overload protection and an over voltage protection limited to 35 VDC.

5.3. Output characteristic curve

The device functions normal under operating line and load conditions. In the event of a short circuit or over load the output voltage and current collapses ($I_{O/L}$ or $I_{S/C}$ is > I_{surg} (150%)). The secondary voltage is reduced and bounces/oscillates until short circuit or over load on the secondary side has been removed.

5.4. Thermal behavior (Fig. 6)

In the case of ambient temperatures above +50°C, the output capacity has to be reduced by 2.5% per increase in temperature. If the output capacity is not reduced when T_{Amb} > 50 °C device will run into thermal protection by switching off i.e. device will go in bouncing/oscillation mode and will recover when ambient temperature is lowered or load is reduced as far as necessary to keep device in working condition.

FOR TECHNICAL ASSISTANCE CALL 1 - 877- ETN - CARE

TECHNICAL DATA FOR PSG60E	
Input (AC)	
Nominal input voltage	100-240 VAC
Voltage range	85-264 VAC (DC input range 120-375 VDC)
Frequency	47-63 Hz (0 Hz @ DC input)
Nominal current	1.1 A @ 115 VAC, 0.7 A @ 230 VAC
Inrush current limitation. I ² t (+25 °C) typ.	< 40A @ 115VAC & <80A @ 230VAC
Mains buffering at nominal load (typ.)	> 20 ms @ 115 VAC, > 125 ms @ 230 VAC
Turn-on time	< 2.5 sec.
Internal fuse Recommended backup fuse	T 3.15 AH / 250 V
Power circuit-breaker characteristic	6 A, 10 A or 16 A B
Leakage current	< 1 mA
Output (DC)	· I IIIA
Nominal output voltage UN / tolerance	24 VDC ± 2 %
Adjustment range of the voltage	22-28 VDC
Nominal current	2.5 A
Derating above +50 °C	2.5 % / K. (< 0 °C 1% / K.)
Startup with capacitive loads	Max. 8,000 µF
Max. power dissipation idling / nominal load approx.	10 W
Efficiency (at 400V AC and nominal values)	> 85 % typical
Residual ripple/ peak switching (20 MHz) (at nominal values)	< 50 mV / < 240 mVpp
Parallel operation	With oring diode
General Data	Alondrian (AISOSO)
Type of housing	Aluminium (Al5052)
Signals MTBF	Green LED DC OK
Dimensions (L x W x H)	> 800,000 hrs. 121 mm x 32 mm x 120 mm
Weight	0.37 kg
Connection method	Screw connection
Stripping length	7 mm or use suitable lug to crimp
Operating temperature	-20 °C to +75°C (> 50°C derating)
Storage temperature	-25 °C to +85 °C
Humidity at +25 °C, no condensation	< 95 % RH
Vibration (operating)	10 to 150 Hz, 0.35 mm acc. 50 m / s², single
	amplitude (5 G max.) for 90 min. in each X, Y & Z
	directions, in acc. with IEC 68-2-6
Pollution degree Climatic class	2 3K3 according to EN 60721
	3K3 according to EN 60721
Certification and Standards	IFOCOCOA 4 (averageltene actorion III)
Electrical equipments of machines Electronic equipment for use in electrical power installations	IEC60204-1 (over voltage category III) EN 50178 / IEC62103
Safety entry low voltage	PELV (EN 60204), SELV (EN 60950)
Electrical safety (of information technology equipment)	EN60950-1 (GS-mark),
Electrical safety (or information teermology equipment)	UL/C-UL recognized to UL60950-1, CSA C22.2 No.60950-1,
	CB scheme to IEC60950-1,
