## PROGRAMMABLE | MULTI-FUNCTION <br> tr-6 Serles time Ranger ${ }^{\text {m }}$

- Four or eight timing functions in one unit easily selectable with rotary switch
- Each unit has 16 timing ranges built-in covering 0.05 seconds-100 hours
- Selecting a range is easy using a 16-position rotary switch (no math is required or DIP switches to set)
- Universal input voltage: 24-240V AC \& 12-125V DC
- Utilizes industry-standard 8 or 11 pin octal sockets
- 10A SPDT or DPDT output contacts can handle most pilot duty and fractional HP loads

Better. By Design.

The TR-681 \& TR-682 Series offer the f exible programmability of a multi-function and multi-range time delay relay together with a universal input voltage. These products provide an easy method to select one of eight (TR-681) or four (TR-682) time delay functions and any time range between 0.05 seconds and 100 hours. Programming is accomplished through the use of two rotary switches to select function and time range. The actual time delay is then set by using the potentiometer to adjust within the selected time range. This product can literally replace hundreds of different catalog numbers, thereby reducing inventory requirements.

## Programming Function \& Time Delay

Setting Function: To set the function, f rst select one of the eight (TR-681 Series) or four (TR-682 Series) functions from the Select Function Chart located on the side of the relay (see right). Position the eight-position rotary switch to the number that corresponds to the desired function. NOTE: Because the TR-682 Series comes with only four functions, but uses an eight-position rotary switch to select a function, each function can be selected with the same number in two positions. NOTE: Function cannot be changed with power applied to unit.

Setting Time Delay and Time Range: To set the desired time delay, f rst select one of the 16 time ranges from the Timing Range Chart located on the side of the relay. Position the rotary switch to the letter that corresponds to the desired time range. Then adjust the time delay within the selected time range by rotating the large knob of the potentiometer located on top of the unit. Note: The tick marks are for reference only.
