

# IN BOX® Floor Box Kit for Existing Floors

## Recessed Wiring Device • Low Voltage Ports, Listed Receptacle

Arlington's **FLBR5420** series **Recessed Floor Box Kits** offer great features, like two low voltage openings, an ultra-thin stamped steel flange, and flush-to-the-floor in-use and blank covers.

Here's the solution for cost-savings and easy installation of a receptacle and low voltage connections in an existing, hard surface floor.

Because the flange is ultra thin and the wiring device is recessed these floor boxes reduce the trip hazard caused by plugs protruding from the box.

You can have power and TWO low voltage openings, in the same box, without the need for a divider. That's convenience!

Installation is quick and easy with a 5" hole saw. Four mounting wing screws attach the 24.5 cubic inch box securely to the floor.

- cULus Listed 20A tamper-resistant decorator-style receptacle.
- SIX Cover finishes/colors  
**Metal** in brass-plated, nickel-plated and antique bronze-plated zinc. And **powder-coated** in black, brown and light almond.

1 With a hole saw cut a 5" diameter hole through flooring and subfloor.

2 Use cover plate screws to secure box to floor flange assembly. Install low voltage devices into pre-installed LV keystone holder.

3 Install low voltage tie-off brackets to back of box (screws supplied). If desired, use cable ties to attach low voltage cables.

4 Place floor box into hole. Orient as desired. Tighten wing screws to secure box to floor.
