## OVERVIEW

The VERTEX series of fixture integrated occupancy sensors with dimming photocells are ideal for standalone industrial lighting control applications. The VERTEX sensor is designed to be used with eldoLED or similar LED drivers with 0-10 VDC, 12-24 VDC auxiliary power and stand-by mode.

Flexibility to change settings with the Acuity VLP mobile device app using Flash Programing or optional Bluetooth communication. The versatile VERTEX sensor is optimized to perform at a variety of mounting heights typical of industrial applications. A stow-able lens shield can be positioned to mask areas where detection is not needed.

VERTEX's small footprint and color options enable seamless integration into the luminaire without disrupting aesthetics or requiring additional mounting space.
